

Haseeb Arshad

Haseebarshad992@gmail.com | [Haseebarshad.me](https://haseebarshad.me) | github.com/Haseeb-Arshad | +923115778343

I'm a builder who enjoys solving ambiguous problems. I've worked across machine learning systems and software engineering, shipping agentic products, voice interfaces, search systems, and operational platforms.

WORK EXPERIENCE

Summon Electronics

Remote

Founding Engineer

November 2025 - Present

- Own architecture and delivery across product, platform, data, AI, and GTM, replacing tightly coupled flows with independently deployable services.
- Designed and deployed an internal agentic system with iterative reasoning, tools, retrieved business context, and persistent workflow state for sourcing, sales, and operations.
- Built a parts data platform handling millions of component records and achieving about 1 ms indexed retrieval in sourcing and sales workflows.
- Built lead-management and sales-intelligence workflows with attribution, enrichment, ownership, and GTM automation, helping increase sales by 30%.
- Architected authentication with asymmetric signing, refresh-token rotation, reuse detection, and immediate invalidation, eliminating shared signing secrets.

REMAP AI

Remote

Full-Stack Developer

March 2025 - November 2025

- Architected the core agent platform around reasoning loops, retrieval, tool orchestration, and persistent memory.
- Led delivery of customer-facing agent experiences, keeping complex AI workflows responsive and maintaining 95+ Lighthouse scores.
- Containerized services and automated releases, sustaining 99.9% uptime and reducing incident-response time by 30%.
- Integrated product and operational systems with workflow automation, removing manual handoffs from deployment and incident response.

SELECTED WORK

Incillum BUILDING - Finance operations AI coworker

- Building a finance-operations coworker that turns invoices, delivery notes, spreadsheets, and email into a checked payable record, then compares it with the purchase order and goods receipt to surface the exact exception.
- Keeping the final decision with a person: source figures remain traceable, nothing posts to the ledger, and no payment moves without review.

Gideon - Voice agent platform for answers that move at conversation speed

- Built a voice agent where speech drives the interface and each answer arrives with a concise result, comparison, sources, and next steps.
- Worked through turn-taking and generative UI so the exchange feels like a conversation instead of a chat transcript.

Oriexa - Marketplace for human and AI-delivered work

- Built a task marketplace where people post work and agents claim, plan, execute, review, and submit it.
- Designed the state transitions and reviewer loop that make agent work inspectable, with REST and MCP entry points.

Sayings - Voice-first social platform

- Designed a social platform that turns spoken posts into structured, searchable pieces with transcription and enrichment.
- Connected recording, interpretation, personalized feeds, and interaction into one voice-first publishing flow.

WORK EXPERIENCE - CONTINUED

Trecsol

Full-Stack Developer

Islamabad, Pakistan

May 2024 - March 2025

- Optimized data-intensive applications and indexing so users could explore millions of records in milliseconds.
- Architected a link-in-bio platform with dynamic profiles, link management, and backend integrations for user-generated pages.
- Owned end-to-end delivery, reducing handoffs by 40% and shipping features 2-3 weeks faster than the team baseline.

Almaymaar

Frontend Developer

Islamabad, Pakistan

May 2023 - April 2024

- Engineered a real-estate sales platform connecting property discovery, customer inquiries, lead routing, and sales follow-up.
- Built and launched theharsukh.com as the production web experience for Harsukh Residencies and its acquisition workflows.
- Integrated public-site and operational data flows so the website served as an acquisition channel, not only a marketing page.

SELECTED WORK - CONTINUED

CodingCam - Developer activity and focus analytics

- Architected a platform spanning an editor extension, event ingestion, and a dashboard for understanding coding activity.
- Built activity and idle detection around file, project, language, and focused-session context so the data describes how a session unfolded.

TraceCLI - Local-first productivity intelligence from the terminal

- Engineered a local-first activity system that captures application usage, browser context, search activity, focus sessions, and resource signals without sending sensitive activity away.
- Designed a natural-language interface over local analytics so people can ask about work patterns, distractions, and long-term focus directly from the terminal.

SKILLS & EXPERTISE

AI & Agentic Systems: RAG, AI agents, agent orchestration, tool calling, MCP, LLM integration, embeddings, vector search, loop engineering, context and memory systems, n8n automation

Backend & Platform Engineering: Node.js, TypeScript, NestJS, Express.js, Go, Python, microservices, REST APIs, GraphQL, WebSockets, OAuth 2.0, JWT, RS256/JWKS, session management, API architecture, caching

Data, Search & Storage: PostgreSQL, pgvector, MongoDB, MySQL, Redis, Elasticsearch, Supabase, Prisma, Mongoose, Sequelize, vector databases, full-text search, high-volume data processing

Frontend Engineering: React, Next.js, TypeScript, Redux, Tailwind CSS, SSR/SSG, responsive and accessible UI, SVG, WebGL, geospatial visualization, Core Web Vitals, performance optimization

Cloud & DevOps: Docker, Kubernetes, GitHub Actions, CI/CD, DigitalOcean, Vercel, Git, Linux, TLS/SSL, CDN, deployment automation

Engineering Practices: System design, database design, microservice architecture, performance optimization, authentication and authorization, unit and integration testing, code reviews, technical design documents

EDUCATION

FAST National University of Computer and Emerging Sciences - Islamabad, Pakistan

Bachelors in Computer Science BS(CS)

CERTIFICATIONS

- Udacity React Nanodegree and LinkedIn React Essential Training
- 365 Data Science SQL + Tableau + Python certification
- Udacity AWS Fundamental course in AWS Machine Learning
- 60-day Udacity challenge
- LeetCode algorithmic challenges
- FAST-NUCES 2019 Artificial Intelligence workshop
